Vinh Hoang

Senior AI Applied Engineer & Senior Front-End Developer | Building End-to-End AI Products

Ho Chi Minh City, Vietnam

Summary

I am a Senior Front-End and AI Applied Engineer who specializes in bringing Large Language Models (LLMs) to life in the browser. While traditional ML focuses on training models, my expertise lies in AI application and orchestration—taking powerful foundational models and turning them into intelligent, autonomous tools that users can actually interact with.I build complete, end-to-end AI products. On the backend, I design complex agentic workflows and RAG systems using LangChain and LangGraph to give AI memory, logic, and task-execution capabilities. On the frontend, I architect the responsive, state-heavy user interfaces required to make human-AI interaction feel seamless and intuitive.If you are looking to move beyond simple chat wrappers and build autonomous AI agents, multi-step LLM workflows, and the robust front-end architectures that power them, let’s connect.

Experience

Backbase

Senior AI Applied Engineer

September 2024 - Present (2 years 2 months)

Vietnam

Contextual

Front End Lead

January 2016 - May 2024 (8 years 5 months)

Sydney, New South Wales, Australia

Education

Hoa Sen University (Not for Profit)

Associate's degree, Network and System Administration/ Administrator · (September 2007 - May 2010)
